## PRODUCT DATA SHEET

### Methyl Ethyl Ketone Peroxide

Issued Date 2016/06/14

#### Description

- Aceox M10 is general methyl ethyl ketone peroxide (MEKPO) used as a curing agent for fiberglass-reinforced plastics and unsaturated polyester resins.

#### Chemical structure

CAS No.:1338-23-4

MW: 174.24

#### Specifications

Typical Properties	Unit	Standard
Appearance		Clear and colorless liquid
Active Oxygen content	%	9.8~10
Density, 20°C		1.130-1.180
Peroxide content	%	45max

#### Applications

- Aceox M10 is mainly applied to the curing of unsaturated polyester resins, and it usually reacts with cobalt accelerator at room or elevated temperatures. This product can be widely used in toughened glass, brass name plates, polyester furniture, artificial agate, buttons, and technological casting.

#### Packaging and storage

- Packaging: (1) 5 kg/can, 4 cans/carton (2) 20 kg/ PE drum.
- Storage: Store in a cool and dry area  
Keep away from high temperatures and flames.  
Preferably at temperature below 30°C.
